

WATER LEVEL CONTROLLER

This innovative system allows you to save on maintenance time and provides an additional protection against water overflow.

It automatically maintains the water level of all aquatic basins such as residential and commercial swimming pools, spas, aquatic gardens, fountains, etc.

Developed and manufactured in Canada, it is the first water level controller “plug & Play”.

It is completely self powered (AL24AC) or can be controlled by automation systems Hayward, Jandy, Pentair, Siemens, Telemecanique, GE, ABB.

The module and valve are installed on the mechanics of plumbing and receive information of the probe that is placed into the skimmer.

The WTNEPROXXX kit includes:

- 1 x level probe connected to an 50 or 100 or 200 ft extension cord
- 1 x controller Interface
- 1 x Solenoid valve
- 1 x fixture kit
